

PADT

Personal Agility Diagnosis Tool

(vIPSO-Pro).

Behavioural Dynamics describe the way we think, feel and act in a given situation - whether it be in simple and routine situations, or in complex situations that seem beyond our control.

With the PADT, you will discover how to ACT rather than REACT for all given situations.

Indeed, being clear and lucid about your own behavioural dynamics will allow you to find more pleasure in your day-to-day activities, as well as boost your performance and effectiveness when dealing with others.

Through the results of the report you get, you will acquire a new understanding of your own behaviour patterns and identify your strengths, weaknesses, and possible areas of improvement as they relate to the following:

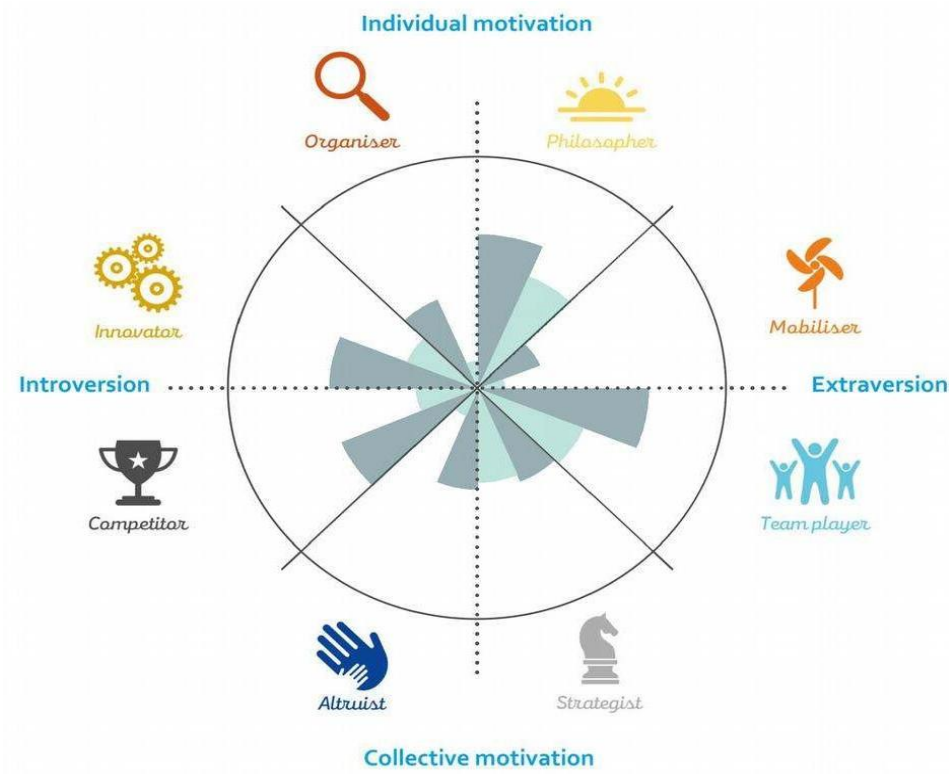

- your motivational dynamics
- your ability to remain calm
- your assertiveness
- your adaptability
- your brakes which prevent you from being yourself.

Presented in 7 parts, the results of the report will help you to assimilate the consultant's feedback and fully understand your behavioural profile. It may also serve to suggest and define an 'action plan' for the future.

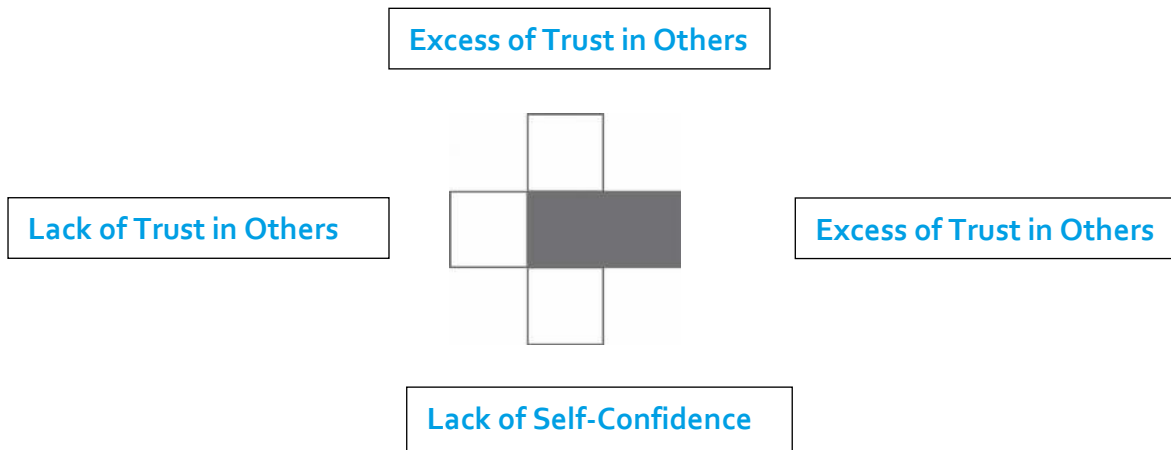

The PADT is the result of 30 years of interdisciplinary research, field studies and scientific expertise, called the 'NeuroCognitive Approach' (NCA.).

BEHAVIOURAL PROFILE – Overview

1. MOTIVATION

2. ASSERTIVENESS

3. ADAPTABILITY
